Presentation Summary

Role of Veterinarians in Livestock Health Management and Rural Empowerment

Veterinarians contribute to strengthen the surveillance of and response to all communicable diseases which are or may emerge as public health threats. In collaboration with the public health authorities they participate in the surveillance and containment in humans and animals of zoonoses and food borne zoonotic diseases of public health importance, and animal diseases with known or potential public health implications; and in the surveillance and containment of resistance to antimicrobial agents in animals, with implications for human health. The presentation largely focuses on four major domains of veterinary extension services:

- Livestock health management
- Public health management
- Entrepreneurship management
- Women empowerment
